

Case Study: Integrated Insourcing/Outsourcing Model

Situation

- A top 10 EU pharmaceutical firm wanted to improve productivity of its *in vivo* study facilities while maintaining control to the best extent
- The client still wanted to keep critical functions in house
- The client was also seeking high operational flexibility

CR Solution

- CR proposed an integrated insourcing/outsourcing model to manage the client's research facilities and related study volume
- CR would provide all key functional support including animals, GLP studies, pathologies and help run IT, back office, QA/QC, etc. at the client's site
- The client could place studies at any of CR's sites

Value to Client

- The client is relieved of the burden of non-core functions
- Still maintaining control in its key facility and assets
- Gaining larger capacity without any capex investment, but with maximum flexibility
- Able to adjust staffing and investments based on pipeline needs
