

Internet Laboratory Information Management System (ILIMS)

Compiling and archiving your health testing results is a complex task, whether your facility has multiple animal rooms or just one. To help you meet your data management needs, Charles River offers ILIMS, a free and secure system that aids in the efficient design and implementation of your QC programs. The browser-based system allows you to store and call up data as necessary, as well as create custom templates and reports.

Applications

ILIMS offers users a range of capabilities. For example, you may choose only to use ILIMS as a simple tool to view and print reports online. For more in-depth analysis, you may use ILIMS' results summarization capabilities. By entering specific facility information into the database, you can create reports detailing the health status of your facility by room, strain, etc.

Additional ILIMS options further streamline the QC process. Users may elect to receive email notification of sample receipt, service and accession approval, and results reports. They may also schedule their own sample submissions for testing (create accessions). In addition, facilities with larger or routine QC programs may create schedule templates that allow for the easy generation of testing schedules for the entire year.

Schedule Management

Maintaining your testing schedule online is simple and convenient. ILIMS allows you to manage your QC schedule by modifying the information in your facility's account.

Test Result Reporting

Online reporting allows you to receive results the moment they are approved. Results can also be provided by email or phone. ILIMS automatically archives your historical data, so you don't have to. This data is available online, for viewing or download, whenever needed.

Features

- 24/7 access to results online
- Print vial labels and submission forms
- Program development - create and modify your QC program online
- Automatic data archiving
- Generate customized reports
- Access and training offered free of charge

To join ILIMS, contact the ILIMS Help Desk at ilims@crl.com or visit dx.criver.com

Security

Charles River recognizes data confidentiality as a top priority. ILIMS was designed with safety in mind, utilizing the latest in internet security technology. The system is equipped with firewalls, secure socket layers for data encryption, and password protection that limits access to applications and your information to authorized personnel. In addition, each user is assigned a role that controls their ability to view and edit information.

Access and Training

ILIMS is free and available to all Charles River customers. You can access ILIMS via Microsoft® Internet Explorer 5.5 and higher. A connection speed of at least 56K is suggested for timely information downloads. Joining is easy; simply contact the ILIMS help desk to take advantage of this free, web-based service. After a user account is set up, you can log in to a secure account at any time to view approved testing results, schedule sample submissions, print reports, and more.
