Guinea Pig VAF Report
North America

Charles River RMS Canada

<i>Location</i> Canada C83 Guinea pigs	<i>Health Status</i> VAF
---	-----------------------------

<i>Summary Item</i>	<i>Method</i>	<i>Primary Lab</i>	<i>Most Recent</i>		<i>Past 18 Months</i>
			<i>Test Date</i>	<i>Positive / Tested</i>	<i>Positive / Tested</i>

COLONY POLICY FOR POSITIVE RESULT:

a = immediate termination; b = planned future recycle of the colony; c = no action.

TESTING SCHEDULE:

d = screened every four weeks; e = screened quarterly; f = screened annually; g = screened quarterly by necropsy examination.

h = results do not include incidental or strain related findings; significant findings would result in immediate termination of the colony.

i = Guinea pig Sendai serology results are from soiled bedding mouse sentinels. Guinea pigs may show Sendai seropositive results secondary to infection by other parainfluenza viruses, i.e. PIV 1 and 3 of human origin.
