

**DRUG DISCOVERY AND DEVELOPMENT SUPPORT**

## Specialist Logistics Services – Domestic and International Shipping

**Advantages:**

- A specialist shipping/logistics department for customers
- Built specifically to help clients do business with Charles River sites globally
- In-house ‘Shipment Design’ processes save clients time and money
- Reduces the complexity of shipping biological and chemical materials worldwide
- Currently focused on Charles River destinations only

**Overview:**

Navigating the rules and regulations for the movement of biological and chemical material can be challenging enough, even before considering cold chain, document production, route design, freight forwarder/courier/integrator management, and compliance with transport hazard classification. The Specialist Logistics Services team directly supports clients by handling the entire shipment design process, and taking care of any necessary arrangements for the physical movement of the commodity from origin to destination, resulting in expedited analysis of discovery material at the destination location(s).

EVERY STEP OF THE WAY

### Research Applications:

To begin, our clients simply contact the Charles River Logistics Manager or their current Charles River Principal Investigator, via phone or email. Shipment requests are then immediately placed through the in-house 'Shipment Design' procedure, with the aim of delivering the commodity to the destination location(s) as quickly as possible, while ensuring compliance with regulatory agencies worldwide.

Shipments automatically go through our on-site 'Shipment Receipt/Accession' process to ensure that any documentation produced matches with the commodity being sent.

### Service Scope:

The service currently extends to Charles River clients who wish to ship products to Charles River sites only.

Main contact: To learn more about the service please contact Sebastian Tomlin (Charles River, Logistics Manager),
