

MICROBIAL SOLUTIONS

 [Click to learn more](#)

Features:

- User-defined filters to create customized reports
- Ability to create objectionable organism list
- 4 levels of user authority
- Ability to customize EM attributes
- Reportable rates of your IDs
- Highest level of data encryption and protection
- Secure user login and password protection
- Compliant with 21 CFR Part 11

Tracking and Trending

A Secure, Compliant and Powerful Data Management Tool

Tracking and trending environmental monitoring (EM) data on a regular basis provides vital information regarding the state of control within the manufacturing area. Many manufacturers rely on manually entering data into an Excel® program or laboratory information management system (LIMS) to track and trend their EM isolates. In an effort to improve the ease and enhance the quality of reporting, we created our Tracking & Trending tool, which is accessed through the Accugenix® customer web portal.

This powerful data management platform keeps a record of every organism identified by Accugenix® and gives our customers the ability to sort and filter specific organisms, analyze frequency of occurrence, Gram reaction and more. Through our platform you can easily customize the where, when, how and who of records to reflect the origin of isolates. Secure data export meets the demands of 21 CFR Part 11 compliance, and supports your ability to perform detailed analysis of reports. All combined, these features ensure the longterm safety of your manufacturing environment.

The Accugenix® Customer Portal

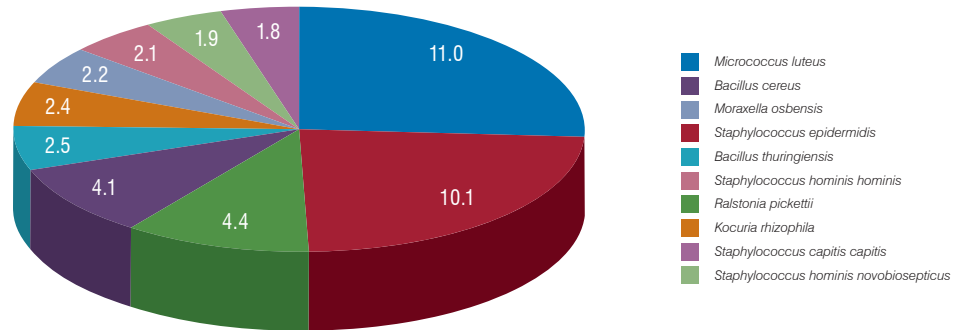

In addition to robust trending of data in your environment, the Accugenix® customer portal offers many valuable features for customers to manage their microbial identifications. Capturing orders from request to results, our innovative online data platform offers you a timely and secure window to your microbial identification laboratory information. At myaccount.accugenix.com, you can submit samples and data files, check the status of your samples, download test results, create custom distribution lists for automatic notifications and review your invoices.

EVERY STEP OF THE WAY

Tracking and Trending Data Examples

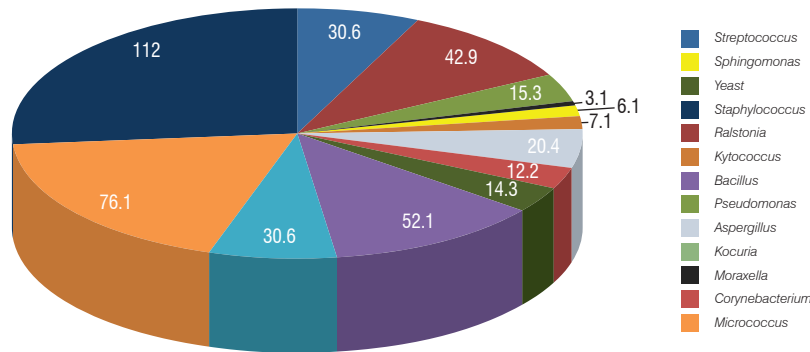

Frequency of Occurrence

Accugenix® Customer Portal Features:

- Electronic sample submissions
- Automatic notification of sample receipt and report availability
- Carrier tracking of your shipments
- Online status of sample testing
- Simplified upload of sample information from a LIMS or any external computer
- Single request form for all services
