

FOLLOW THE EXAMPLE OF ONE MAN WHO SET THE STANDARD FOR COMPASSION.

Humane and ethical treatment. It is our responsibility to treat our animals with compassion. Because they are living, feeling creatures and it's the right thing to do. Because their health will impact the quality of biomedical research. Because lives depend on it.

*Dr. Henry L. Foster, founder
Charles River Laboratories*

ALBINO RATS

Descendants of the Sprague-Dawley strain, and

- * All animals under constant veterinary control and supervision
- * Annual production of rats over 250,000 assures rapid service

Personnel at the Breeding Labs are carefully screened since we acknowledge that the disposition of the caretakers is usually reflected in the animals

All animals shipped from our breeding farms are of a known age, dates of birth supplied. All litters are reduced to a fixed number shortly after birth to insure the greatest possible uniformity and consistency

Our technicians are routinely performing hypophysectomies, adrenalectomies, and other surgical procedures on rats

We invite your request for timed pregnancies and any other types of specialized rat that is needed on your research project

All shipments which originate from our breeding farms are shipped through Boston, MA, assuring the fast through service obtainable by rail or air

All animals are shipped in non-returnable lightweight containers for your protection and convenience

For many uses of Charles River animals have been proven through the years by many of the foremost medical schools, pharmaceutical manufacturers, hospitals, and private research consultant laboratories throughout the US and Canada

THE CHARLES RIVER BREEDING
Wilmington, Massachusetts.
