

# Thyroidectomy with Parathyroid Re-implantation

## Surgery Code: THYROX

The thyroidectomy with Parathyroid Re-implantation is of benefit to preclinical or research studies involving the endocrine system.

### Animal Models

Typical selections are listed below; however, choices for strain, age and weight may be limited due to model anatomy and/or physiological conditions.

- Rats: male/female, any strain, weight  $\geq$  150g.

### Procedure Details

- **Perioperative care:** Please view our Pre- and Postoperative Care Sheet, which can be found at [www.criver.com/opcare](http://www.criver.com/opcare).
- **Housing:** The animals can be group housed.
- **Diet:** No special diet is required.
- **Postoperative holding period:** At a minimum, post-op animals are held overnight, with the majority of animals shipping within 7 days of surgery.
- **Maintenance:** Incision wound clips should be removed 7-10 days after surgery.

### Surgical Summary

An incision is made on the ventral midline of the neck. The salivary glands and sternohyoid muscles are retracted. A pair of parathyroid glands are identified, removed and are implanted back into the musculature that surrounds the thyroid glands. The thyroid gland is removed. The skin incision is closed with wound clips or per request.

### IACUC

The Charles River Institutional Animal Care and Use Committee (IACUC) governs the entire surgical process, including all anesthesia, analgesia, animal preparation and any postoperative holding in Charles River facilities prior to shipment. Review of experimental protocols, authorization to order animals that are surgically modified from Charles River, and all aspects concerning the use of the animals after they arrive at the institution are the responsibility of the receiving institution's IACUC.
