

Blood Pressure, Male SS-13^{BN} Rats

Blood pressure in male SS-Chr 13^{BN}/MwiCrI rats. Following weaning at 21 days of age, animals were fed 0.3% salt AIN76a diet. From 56 days through 103 days of age, rats were fed 8% salt AIN76a, after which they were fed 0.3% salt Charles River's standard production diet (Purina LabDiet, 5L79) through 132 days of age (N = 4, data represented as mean \pm SEM). Direct blood pressure was measured using Dataquest ART (Data Sciences International) telemetry technology.
Study dates: March 18, 2010 - June 3, 2010.
